AWS Cloud & DevOps Engineer with 3 years of experience designing, automating, and optimizing end-to-end software delivery pipelines. Proven track record in building scalable AWS infrastructures (EC2, VPC, S3, RDS, Lambda, CloudWatch) and implementing CI/CD workflows using Jenkins, Maven, Ansible, and Chef. Skilled in Bash and Python scripting to streamline deployments, reduce manual effort, and improve system reliability. Adept at collaborating in Agile teams, leveraging Git/SVN for version control, and aligning DevOps practices with business goals.

EXPERIENCE

PNC Bank

Jan 2025 – Present

Aws DevOps Engineer

Pittsburgh,PA

- Managed AWS IAM users and groups by assigning precise policies and roles to ensure secure access control.
- Designed high-availability environments for application and database servers on EC2 using ELB and Auto Scaling.
- Developed automation scripts for build, deployment, and maintenance using Jenkins, Docker, Maven, Python, and Bash.
- Monitored AWS resources and applications with CloudWatch by creating alarms and enabling notification services.
- Integrated Jenkins with GitHub private repositories, build automation tools (Maven, Ant), and artifact repositories to streamline CI/CD workflows.
- Used Chef for configuration management of web applications, config files, databases, and system packages

PNC Bank

May 2024 – Aug 2024

Aws cloud engineer intern

Pittsburgh,PA

- Designed and deployed AWS solutions using EC2, S3, EBS, ELB, Auto Scaling, and OpsWorks to ensure scalability and high availability.
- Automated infrastructure provisioning and deployment using AWS CloudFormation templates.
- Created and configured EC2 instances, security groups, and MySQL VMs through CloudFormation scripting.
- Implemented topic/subscription-based notification routing using AWS SNS for efficient event handling.
- Integrated Jenkins with GitHub, Maven, and Ant to build and deploy code seamlessly through CI/CD pipelines.
- Configured Chef to automate environment setup, including Apache configurations and file-level permissions.

Hexaware Technologies

Aug 2021 – Jul 2023

Software engineer

Hyderabad, India

- Automated the CI/CD process to merge code from development to staging and production environments with proper QA certification.
- Designed and implemented auto-scaling architecture for both AWS EC2 and on-premises data centers.
- Utilized Jenkins, Chef, and Shell scripts to automate code deployment and continuous integration workflows.
- Developed Shell and Python scripts to automate package installations and web server configurations.
- Created and configured AWS VPCs with public subnets for web servers and private subnets for secure database and application servers.
- Monitored AWS services and infrastructure performance using CloudWatch.

PROJECTS

AWS Cloud-Native CI/CD Automation

- Designed and implemented an end-to-end CI/CD pipeline on AWS using Jenkins, GitHub, and Maven, enabling seamless integration and automated deployments to multiple environments.
- Automated infrastructure provisioning with AWS CloudFormation and Terraform, deploying EC2 instances, security groups, RDS databases, and application load balancers with minimal manual intervention.
- Integrated AWS CodeDeploy with Jenkins to ensure zero-downtime deployments for microservices hosted in Docker containers on EC2.
- Implemented CloudWatch alarms and SNS notifications for real-time infrastructure monitoring and proactive incident alerts.
- Optimized deployment speed by reducing build times by 35% through parallel build stages and automated artifact versioning.

DevOps Pipeline with Docker, Kubernetes & Terraform

- Architected a fully automated CI/CD pipeline using Jenkins, GitHub, Maven, and Ansible to deploy applications across staging and production environments.
- Containerized legacy Java and Python applications using Docker and orchestrated deployments on Kubernetes for scalability and high availability.
- Automated infrastructure and server configuration using Terraform and Chef cookbooks, reducing manual setup time from hours to minutes.
- Implemented centralized logging with ELK Stack for enhanced troubleshooting and performance analytics across all environments.
- Reduced deployment errors by 40% through automated testing and configuration validation integrated into the pipeline.

SKILLS

- **Version Control:** Git, SVN
- **CI/CD Tools:** Jenkins, Maven
- **Configuration Management:** Chef, Puppet, Ansible
- **Infrastructure as Code (IaC):** Terraform, AWS CloudFormation
- **Cloud Platforms:** AWS (EC2, VPC, EBS, S3, IAM, RDS, AMI, SQS, SNS, DynamoDB, CloudWatch, Lambda, CloudFormation)
- **Scripting Languages:** Shell Scripting (Bash), Python, SQL
- **Databases:** Oracle, MySQL, DynamoDB
- **Operating Systems:** RedHat Linux, Unix, Windows
- **Web Technologies:** HTML, JavaScript, JSP, XML
- **Monitoring & Logging:** CloudWatch, ELK stack
- **Containerization & Orchestration:** Docker, Kubernetes

EDUCATION

Master of Science in Computer Science

Kennesaw State University, GPA: 3.72/4.0

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (Amazon Web Services)
